lo4 Cast Pump Engineering Dimensional Outline

Io4 NPSHr value for Standard Disc Valves

• FMC recommends NPSHa (available) exceeds NPSHr (required) by 5 feet of water.

• Take special consideration when calculating NPSHa. Recalculate NPSHa after pump model has been selected for more accurate values.

• NPSHr values are in feet of water. If you are pumping a different liquid than water, convert the required NPSH from water to the liquid being pumped by dividing the published NPSHr value by the specific gravity of the liquid being pumped.

• FMC published NPSHr values are based on test data collected on specific pumps at the factory and are estimated values. Actual NPSHr values for an ordered pump can only be determined by a factor test. For NPSH critical applications, contact the factory for additional information and request an NPSHr test performed on your pump before shipment.

• Pump drawing dimensions in inches.
